Perfect Pitcher Filter Replacement Instructions

With your investment in clean, healthy water, AlkaViva recommends taking the following steps for optimum performance when replacing the Perfect Pitcher Replacement Filter.

1. Remove the Perfect Pitcher Replacement Filter from the plastic wrap.
2. Insert the Perfect Pitcher Replacement Filter into the reservoir and press firmly on the filter to ensure a tight seal. The Perfect Pitcher Replacement Filter will sit up above the bottom of the reservoir. It is designed to do this and will work properly in this position.
3. Fill the upper reservoir with water and let water drain through the Perfect Pitcher Replacement Filter into the bottom reservoir. Pour the water out and repeat until the water is clear. Water in the first few reservoir fills will be gray due to carbon dust. **THIS IS NORMAL!** This process will ensure that the Perfect Pitcher Replacement Filter is thoroughly rinsed and ready for use.
4. Your Perfect Pitcher is now ready to provide clean, contaminant-free water.
5. If you experience slow flow, remove your filter cartridge and shake it until you hear and feel the media loosen. Replace following Step 2.
