

## Manual Addendum

# New and Improved Ultra Delphi

### **Front Cover**

This is the correct manual for the New and Improved Ultra Delphi despite the title just reading Delphi.

**Page 16** - See attached drawing for proper faucet dimensions before cutting hole in countertop.

### **Page 18 - How to install the external valve.**

Instead of using the external valve, we provided an Angle Stop Adapter with a valve. The external valve described in the manual is not necessary.

### **Page 25 / 26 - How to add calcium.**

In addition to the Calcium Insert, we also provided a Scale Guard Insert. For soft water or low mineral content water, use Calcium Insert. For hard water, use the extra Scale Guard. Refer to the Hard Water Test Information provided in your welcome package.

**Note: Step 5** - The Calcium Insert and the Scale Guard Insert provided are already filled with beads. Do not transfer the beads! When replacing your inserts, simply dispose of the old basket and replace with your new basket.

### **Page 27 - How to replace the filter.**

**Note: Step 3** - The New and Improved Ultra Delphi does not have a Filter Cup at the bottom of the filter.

### **Page 29 - Which filter is best for you.**

The BioStone Filter mentioned on Page 29 is a good filter. For best filtration, we recommend the UltraWater Filter.

### **Page 33 - Product specifications.**

Input Electricity (Power consumption) is now 110W, not 80W as listed.

### **Page 34 - How to assemble the spouts.**

New and improved Ultra Delphi Faucet Spouts are slightly different than the one shown in pictures.

**IMPORTANT** - To protect your faucet, refer to the “Read Me First” and the video ([vimeo.com/158129189](https://vimeo.com/158129189)) for proper positioning of the internal tubing of your Ultra Delphi Faucet Spouts.
