

DO NOT VOID YOUR WARRANTY!

Make sure to complete the following steps:

STEP 1 - Watch the installation video prior to installation - you will find it at:

vimeo.com/158129189

STEP 2 - Test Your Tap Water - using the enclosed Hard Water Test Strip. This will take you less than 2 minutes and potentially save you hundreds of dollars in future repair costs.

STEP 3 - Validate Your Warranty - online at

alkaviva.com/warranty-form

Warranty must be completed within 30 days of purchase.

IMPORTANT NOTES:

- **IF YOUR IONIZER IS WET** - Some residual water may be present. Water is run through every machine for quality control and testing purposes.
- **WELL WATER** - Before using any well water, it is critical that a water test be done to ensure that your water is potable (safe for drinking). For testing, please visit: alkaviva.com/professional-testing
- **INSTALLATION REQUIREMENT** - AlkaViva requires installation be performed by a qualified, licensed and bonded professional plumber or contractor. AlkaViva will not be held responsible for any damages caused by improper installation.

When scheduling the installation of your ionizer, we recommend that you email techsupport@alkaviva.com at least 48 hours in advance to ensure a technician will be available during your installer's visit. Our office hours are Monday - Friday, 8am-5pm, (PST).

- **WATER SOFTENER** - Do not use an ionizer with a sodium or potassium-based ion exchange softening system without first consulting with your AlkaViva Associate or Technical Support.

IMPORTANT NOTES (Continued):

- **REMOVE THE FILM** - The display on your unit comes with a removable protective plastic film.
- **CHECK FILTER** - The filter may have come loose during shipment. Refer to your Owner's Manual and check your filter **prior** to use. For information on proper filter installation, watch:

vimeo.com/158136312

- **IRON CAUSES MAJOR DAMAGE** - Orange stains in your plumbing indicate iron in your water supply.

Should you require assistance,
please fill out the Ionizer Repair/Support Form at:

alkaviva.com/repairs

**DO NOT attempt to repair your water ionizer.
Doing so will VOID YOUR WARRANTY!**

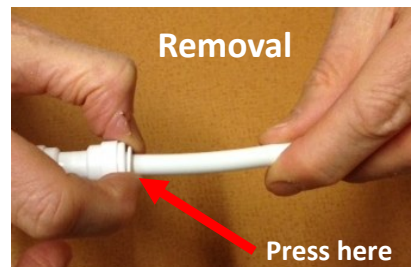

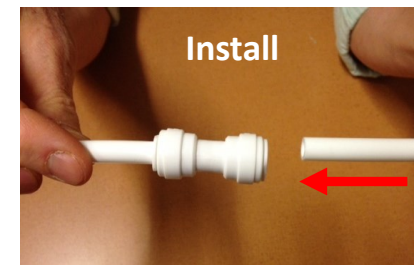

MANUAL UPDATE

Your ionizer comes with **1 Calcium Insert for Soft Water** and **1 Scale Guard Insert for Hard Water**. Use the calcium insert only if you have soft water and the scale guard insert only if you have hard water.

Quick Connect Fitting Release

Install:

Insert 1/4" tubing into Quick Connect Fitting and **PUSH IN** firmly until it can't go further.

Removal:

Hold Quick Connect Fitting end with thumb and index finger. Press in on the ring while pulling out the 1/4" tubing in opposite direction.

Dust Pre-Filter

A dust pre-filter is included with all ionizer models. The dust pre-filter is pre-installed on the 1/4" tubing that should be installed at the tap water inlet. See photos below. NOTE: Your Dust Pre-Filter may look different than the picture.

1. Dust Pre-Filter comes attached

2. Install at Tap Water Inlet

3. Installed

Proper Positioning of Faucet Tower Tubing

IMPORTANT: When connecting Faucet Tower tubing to Base Unit, be careful not to pull on the white tubing. White tubing must extend out of both spouts. If the tubing is pulled in, it will leak and cause damage to the Faucet Tower. To illustrate, in the pictures below the faucet tips have been removed from the faucet spouts.

Correct—White Tubing Showing

Incorrect—No Tubing
